ANTERIOR SCALERS

Anterior Scalers are used to remove deposits from supragingival surfaces of anterior teeth. There are three basic design classifications for anterior scalers—Sickle Scalers (curved blade with a pointed tip), Jacquette Scalers (straight blade with a pointed tip) and Hoe Scalers (flat or rounded blades). In this section, you will find many anterior scaler combinations and designs for every application.

Double End Sickles

Sickle N5-N5S  Both sickles have an identical moderate size, medium-reach length. The N5 blade width is 0.9 mm and the N5S blade is reduced by 20% to 0.7 mm to help gain access in very tight contact areas.

Anterior Lingual Stain Remover (ALSR) Combines a contra-angled anterior hoe and a contra-angled spoon into one instrument that easily removes stain from anterior lingual surfaces. The hoe has a 2 mm blade width and makes it easy to “push back” the sulcus as you scale along the gum-line. The spoon has a 2 mm diameter blade that easily adapts to the concavities and grooves of the upper lingual anatomy.
